Git and Github

Git :- Git is a software and a version control System that allows you to track changes

Github :- Github is a way to host that software online. Github is a server.

Version control Systems (VCS)

Version control system are used to manage the history of your code.

Terminology

- Folder, directory but in git we called repository in short repo.

- Check your git Version command is

```
git --version
```

Repository

a repository is a collection of files and directories that are stored together.

Print Working Directory (pwd)

It's primary purpose is to tell you exactly where you are currently located in the file System.

List (ls)

This used to display the file or contain within a directory.

cd - Change Directory

- To see the current state of your repository

```
git status
```

- Setup your email and username in this config file

```
git config --global user.email "youremail@-com"
git config --global user.name "your name"
```

- Check your config settings

```
git config --list
```

- Creating a repository

```
git status
git init
```

git init command will create a new folder on your system and initialize it as a git repository also hides a .git folder.

- Commit

Write ⇒ add ⇒ Commit

Commit is a way to save your changes to your repository.

Porcelain command

Option=flag

SHREE

Date: / / Page No.

git commit -m "Commit message"
git status

- Tell git to track a perticular file

  git init
  git add <file> <file2>
  git status
